PROFESSIONAL SUMMARY

Software engineering graduate with a passion for solving complex problems through code, and hands-on experience building full-stack web applications using React, Node.js, and Python. Backed by a data analytics internship managing CRM/ERP systems and Power BI reporting, with skills spanning responsive front-end interfaces, REST API development, and relational database design (MySQL, PostgreSQL, Oracle), plus growing experience in mobile development using Flutter. Thrives on breaking down challenging problems into clean, effective solutions, and brings strong collaborative and analytical skills to a junior software engineer role.

WORK EXPERIENCE

Junior Data Analyst Intern

February 2025 – April 2025

Agile Business Solutions Limited | Nairobi, Kenya

- CRM/ERP Data Management in Dynamics 365: Managed, updated, and validated structured project and operational records within Microsoft Dynamics 365, ensuring high data accuracy and standardized metadata across system databases.
- Power BI Dashboard Development: Integrated data streams from Microsoft Dynamics 365 and Excel into Power BI, designing interactive visual dashboards that streamlined tracking of key project metrics and reduced manual reporting time by 30%.
- Data Cleaning & Integration: Automated data cleanup pipelines using Power Query and validation scripts, ensuring 100% dataset consistency before dashboard integration.

PROJECTS

BugHive — Gamified Bug Tracking CLI ([link](#))

- Built a Python CLI application for bug tracking and project management, implementing role-based access control with distinct Admin and Developer permission levels.
- Designed a JSON-based persistent storage layer with an object-oriented data model (User, Bug, Project, Gamification) to manage bug reports, project assignments, and user records.
- Implemented core workflows including bug reporting with severity levels and multi-assignee support, project creation/assignment, and a points-based leaderboard to gamify issue resolution.
- Wrote unit tests with pytest covering user, bug, project, and gamification logic, and packaged the tool for installation via pip/setup.py.

KejaHunt — Full-Stack House Listing Platform ([link](#))

- Contributed to a full-stack house-hunting platform connecting property owners and renters, built with a React (Vite, Tailwind CSS) frontend and a FastAPI/SQLAlchemy backend.
- Implemented JWT-based authentication using HTTP-only cookies, alongside API-driven features for property listings, saved homes, roommate matching, messaging, and notifications.
- Built a viewing-request workflow allowing renters to request property viewings and owners to confirm, decline, or reschedule, with real-time in-app notifications.
- Worked across a REST API architecture with documented endpoints (FastAPI's auto-generated docs) and automated test coverage using pytest.

Vibe Kitchen — Mood-Based Recipe Discovery App ([link](#))

- Collaborated on a React (Redux Toolkit, React Router) web application that recommends recipes based on user mood, with filtering for dietary preferences, health conditions, and allergies.
- Owned API integration, connecting the frontend to a JSON Server backend and handling request/response logic to power recipe search, filtering, and the personal recipe collection.
- Implemented state management using Redux Toolkit to handle mood selection, filters, and recipe data, keeping the UI in sync with user input across pages.
- Built with a Vite build pipeline and ESLint configuration, contributing to a well-structured, tested codebase (Jest, React Testing Library).

EDUCATION

Software Engineering

Moringa School | Nairobi, Kenya

February 2026 – August 2026

Information Technology (Bachelor's degree)

Dedan Kimathi University of Technology | Nyeri, Kenya

September 2022 – June 2026

CERTIFICATIONS

CCNAv7: Introduction to Networks — Cisco Networking Academy (April 2023)

Partner: NDG Linux Essentials — Cisco Networking Academy (August 2024)

SKILLS

JavaScript, CSS, MySQL, TypeScript, RESTful API, SQL, HTML, JSON, Python, React, Node.js, PostgreSQL, Oracle, Flutter, Power BI
