PROFESSIONAL SUMMARY

BSc Information Technology graduate who completed an intensive software engineering program. Builds full-stack applications end-to-end — recently shipping a booking platform with real M-Pesa payment integration and 88% test coverage, plus a React/Redux recipe app with a mood-based recommendation engine. Hands-on with Microsoft Dynamics 365 from a data analytics internship. Comfortable owning a feature from UI to API to deployment using React, Python (FastAPI, Flask), and PostgreSQL. Brings project management skills from serving as Scrum Master on a 4-person team, running sprint planning and standups.

WORK EXPERIENCE

IT Intern *February 2025 – April 2025*

Agile Business Solutions Limited | Nairobi, Kenya

- Gained hands-on exposure to Microsoft Dynamics 365, learning how its CRM/ERP modules structure and link project, customer, and operational records. Applied this understanding to implement structured data entry processes and basic automation workflows within the platform, improving consistency and reducing manual effort in day-to-day data handling.

KEY PROJECTS

Spacer — Space Booking Platform (link) *Aug 2026 – Sep 2026*

A booking platform for browsing, listing, and managing shared spaces, with M-Pesa payment integration and separate dashboards for hosts managing listings and clients managing their bookings. Built with a 4-person team (served as Scrum Master); 39 REST API endpoints, 88% automated test coverage.

- **Built** the M-Pesa payment workflow end-to-end, JWT authentication, database configuration, and API endpoint and routing setup, and handled testing and deployment, while serving as Scrum Master — running sprint planning and standups and keeping the team unblocked.
- **Used** FastAPI/SQLAlchemy with PostgreSQL for the backend, JWT for authentication, and the Safaricom Daraja API for M-Pesa payments.
- **Dealt with** the complexity of integrating a real-time mobile payment flow, by handling the Daraja STK push and callback webhook so a booking's payment status updates automatically once the user completes payment on their phone.

KejaHunt — Full-Stack House Listing Platform (link) *Jul 2026 – Aug 2026*

A full-stack platform connecting property owners and renters, letting owners list properties and manage inquiries while renters search, save, and request viewings for homes that fit their needs. Built with a 4-person team; 37 REST API endpoints, 74% automated test coverage.

- **Built** authentication and protected endpoint configuration, backend input validation, and error handling, and owned the inquiries and viewing-request workflow end-to-end.
- **Used** FastAPI and SQLAlchemy on the backend with JWT-based authentication via HTTP-only cookies, alongside pytest for backend testing.
- **Dealt with** the friction of scheduling property viewings, by building a request-based workflow with real-time notifications so renters and owners could confirm, decline, or reschedule without back-and-forth calls or texts.

Vibe Kitchen — Mood-Based Recipe Discovery App (link) *May 2026*

A recipe discovery app that recommends meals based on the user's mood, while filtering out options that conflict with their dietary preferences, health conditions, and allergies.

- **Architected** a mood-based recommendation engine with complex filtering logic for dietary and health constraints, utilizing Redux Toolkit for efficient state management.
- **Used** React (Redux Toolkit, React Router) for the frontend, a JSON Server backend, and Redux Toolkit for state management.
- **Dealt with** the difficulty of finding meals that fit both how someone feels and what they can safely eat, by combining mood-based recommendations with allergy and dietary filtering in one search flow.

EDUCATION

Software Engineering *February 2026 – August 2026*

Moringa School | Nairobi, Kenya

Information Technology (Bachelor's degree) *September 2022 – June 2026*

Dedan Kimathi University of Technology | Nyeri, Kenya

CERTIFICATIONS

CCNAv7: Introduction to Networks — Cisco Networking Academy (April 2023) | Partner: NDG Linux Essentials — Cisco Networking Academy (August 2024)

SKILLS

Languages: JavaScript, TypeScript, Python, SQL

Frontend: React, Vite, HTML, CSS

Backend: FastAPI, Flask, SQLAlchemy, PostgreSQL, MySQL, Oracle

Tools & Other: Git, GitHub, RESTful API, JSON, Flutter, Power BI, Vercel, Render
