PROFESSIONAL SUMMARY

Software engineering graduate with a passion for solving complex problems through code, and hands-on experience building full-stack web applications using React, Node.js, and Python. Backed by a data analytics internship managing CRM/ERP systems and Power BI reporting, with skills spanning responsive front-end interfaces, REST API development, and relational database design (MySQL, PostgreSQL, Oracle), plus growing experience in mobile development using Flutter. Thrives on breaking down challenging problems into clean, effective solutions, and brings strong collaborative and analytical skills to software engineering roles.

WORK EXPERIENCE

Junior Data Analyst Intern

February 2025 – April 2025

Agile Business Solutions Limited | Nairobi, Kenya

- CRM/ERP Data Management in Dynamics 365: Managed, updated, and validated structured project and operational records within Microsoft Dynamics 365, ensuring high data accuracy and standardized metadata across system databases.
- Power BI Dashboard Development: Integrated data streams from Microsoft Dynamics 365 and Excel into Power BI, designing interactive visual dashboards that streamlined tracking of key project metrics and reduced manual reporting time by 30%.
- Data Cleaning & Integration: Automated data cleanup pipelines using Power Query and validation scripts, ensuring 100% dataset consistency before dashboard integration.

KEY PROJECTS

KejaHunt — Full-Stack House Listing Platform ([link](#))

A full-stack platform connecting property owners and renters, letting owners list properties and manage inquiries while renters search, save, and request viewings for homes that fit their needs.

- **Built** the platform's core listing and matching features — property listings, saved-homes bookmarking, roommate matching, and in-app messaging — across a full-stack architecture.
- **Used** React (Vite, Tailwind CSS) for the frontend, FastAPI and SQLAlchemy for the backend, and JWT-based authentication with HTTP-only cookies for secure sessions.
- **Dealt with** the friction of scheduling property viewings, by building a request-based workflow with real-time notifications so renters and owners could confirm, decline, or reschedule without back-and-forth calls or texts.

Spacer — Space Booking Platform ([link](#))

A booking platform for browsing, listing, and managing shared spaces, with M-Pesa payment integration and separate dashboards for hosts managing listings and clients managing their bookings.

- **Built** a booking engine with separate host and client dashboards, layered on top of the browsing, listing, and space-management features.
- **Used** React (Vite, Redux Toolkit) on the frontend, FastAPI/SQLAlchemy with PostgreSQL on the backend, Supabase Auth for authentication, and the Safaricom Daraja API for M-Pesa payments.
- **Dealt with** the risk of double-bookings and the hassle of manual payment tracking, by building availability-checking logic and integrating real-time M-Pesa payments directly into the booking flow.

Vibe Kitchen — Mood-Based Recipe Discovery App ([link](#))

A recipe discovery app that recommends meals based on the user's mood, while filtering out options that conflict with their dietary preferences, health conditions, and allergies.

- **Built** the mood-based recommendation flow and filtering system, layering dietary preference, health condition, and allergy filters on top of the recipe search.
- **Used** React with Redux Toolkit and React Router for state management and navigation, integrated with a JSON Server backend.
- **Dealt with** the difficulty of finding meals that fit both how someone feels and what they can safely eat, by combining mood-based recommendations with allergy and dietary filtering in one search flow.

EDUCATION

Software Engineering

February 2026 – August 2026

Moringa School | Nairobi, Kenya

Information Technology (Bachelor's degree)

September 2022 – June 2026

Dedan Kimathi University of Technology | Nyeri, Kenya

CERTIFICATIONS

CCNAv7: Introduction to Networks — Cisco Networking Academy (April 2023) | Partner: NDG Linux Essentials — Cisco Networking Academy (August 2024)

SKILLS

JavaScript, CSS, MySQL, TypeScript, RESTful API, SQL, HTML, JSON, Python, React, Node.js, PostgreSQL, Oracle, Flutter, Power BI
